THE ORIGINAL EQUIPMENT MANUFACTURER

control of the vehicle, leading to an accident and serious injury.

and obey all traffic laws. Avoid sudden, sharp turns or aggressive driving.

WARNING: Before you replace your tires, always consult the vehicle manufacturer’s recommendations or at maximum intervals specified.

ON THE SAME AXLE

Temporary repair or use an inner tube as a substitute for a proper tire.

be dismounted and inspected by an expert. If you have any doubt about the condition of your tires, it is best to have them inspected by a professional.

Frequent (at least monthly) and before any trip inspection of the tires is recommended. This includes checking for loose or missing bolts, tire pressure, and overall condition.

In severe cracking, component separation or “blowout.” Never fit a tire on a rim that is larger than the original rim. The speed capability of the tire may be reduced if the rim size is different from the original.

Fitment of a tire, such as a Load Range D, with less carrying capacity is not allowed.

NOTE: Goodyear-manufactured and/or marketed European-Metric tires are designed for a specific load range and must be used with tires of the same section width, same aspect ratio, and same rim size. Overloading your trailer tires can result in failure and may cause tire failure.

Retreaded passenger and light truck tires are not warranted by Goodyear or Dunlop.

In order for Goodyear Run-Flat (Extended Mobility Technology [EMT]), RunOnFlat [ROF] and Dunlop Run-Flat (Dunlop Self-Supporting Technology [DSST]) tires to obtain the performance criteria stated in this manual, they must be used only on vehicles specifically designed and equipped for Goodyear Run-Flat tires.

The Goodyear or Dunlop Run-Flat tire is a high-performance tire system authorized by the Original Equipment Manufacturer (OEM) to the vehicle. Goodyear and Dunlop Run-Flat tires are designed for use only on vehicles specifically designed and equipped to use Run-Flat tires. Goodyear or Dunlop Run-Flat tires cannot be used on vehicles not equipped with specified operational low tire pressure-monitoring system.

Remember that when your tires have lost air pressure, your vehicle’s performance may be seriously affected, leading to instability and reduced control.

WARNING

Do not use a Goodyear or Dunlop Run-Flat tire if it is underinflated. The tire can fail when operated in an underinflated condition, resulting in loss of performance and possibly loss of control.

PROPER MATERIALS AND PROCEDURES

A properly functioning low tire pressure-monitoring system can alert you to a tire pressure loss, allowing you to take corrective action. However, the tires may not be usable if the system is not properly operating.

To obtain service after operating under low-inflation conditions, take the vehicle to an authorized Goodyear or Dunlop Run-Flat service facility. Service personnel will inspect your tires to determine if they are serviceable. In some cases, the run-flat tires may be repaired to correct a puncture in the tread.

The Goodyear or Dunlop Run-Flat tire can be driven at low or zero air pressure for limited distances with a remarkable feature: It can operate for limited distances with very low or even no inflation pressure (refer to your Vehicle Owner’s Manual for proper repair instructions).

Goodyear-manufactured and/or marketed European-Metric tires are specifically designed for a specific load range and must be used with tires of the same section width, same aspect ratio, and same rim size. Overloading your trailer tires can result in tire failure.

The Goodyear or Dunlop Run-Flat tire is a high-performance tire system authorized by the Original Equipment Manufacturer (OEM) to the vehicle. Goodyear and Dunlop Run-Flat tires are designed for use only on vehicles specifically designed and equipped to use Run-Flat tires. Goodyear or Dunlop Run-Flat tires cannot be used on vehicles not equipped with specified operational low tire pressure-monitoring system.

Goodyear or Dunlop Run-Flat tires are designed for use only on vehicles specifically designed and equipped to use Run-Flat tires. Goodyear or Dunlop Run-Flat tires cannot be used on vehicles not equipped with specified operational low tire pressure-monitoring system.

The Goodyear or Dunlop Run-Flat tire is a high-performance tire system authorized by the Original Equipment Manufacturer (OEM) to the vehicle. Goodyear and Dunlop Run-Flat tires are designed for use only on vehicles specifically designed and equipped to use Run-Flat tires. Goodyear or Dunlop Run-Flat tires cannot be used on vehicles not equipped with specified operational low tire pressure-monitoring system.

The Goodyear or Dunlop Run-Flat tire is a high-performance tire system authorized by the Original Equipment Manufacturer (OEM) to the vehicle. Goodyear and Dunlop Run-Flat tires are designed for use only on vehicles specifically designed and equipped to use Run-Flat tires. Goodyear or Dunlop Run-Flat tires cannot be used on vehicles not equipped with specified operational low tire pressure-monitoring system.
WHO IS ELIGIBLE?
You are eligible for the benefits of this Limited Warranty if you meet all the following criteria:

• You are the owner or authorized agent of the owner of new Goodyear or Dunlop® highway auto or light truck tires or Goodyear Special Trailer (ST) tires supplied as Original Equipment on your vehicle or trailer.

• Your tires bear Department of Transportation prescribed tire identification numbers.

• Your tires have been used only on the vehicle on which they were originally installed according to the vehicle manufacturer’s or Goodyear’s recommendations.

• Your tires were purchased on or after November 1, 2018.

Light truck tires are defined as all tires identified with the “LT” designation in the sidewall stamping. e.g., LT245/75R16.

Special Trailer tires are defined as all tires identified with the “ST” designation in the sidewall stamping, e.g., ST235/80R16.

WHAT IS COVERED AND FOR HOW LONG?

FREE TIRE REPLACEMENT
Any new Goodyear or Dunlop highway radial auto, radial light truck tire or Goodyear Special Trailer (ST) tire, covered by this policy, removed from service due to a covered warranty condition during the first 2/32" of usable tread or twelve months from date of purchase, whichever comes first, will be replaced with a comparable new Goodyear or Dunlop tire at no charge, including mounting and balancing. (Without proof of purchase the date of manufacture will be used to determine eligibility.)

ALL OTHER HIGHWAY AUTO OR LIGHT TRUCK TIRES
Any new Goodyear or Dunlop highway auto or light truck tire, other than radial auto or radial light truck tires, removed from service due to a covered warranty condition during the first 1/32" of usable tread will be replaced with a comparable new Goodyear or Dunlop tire at no charge, including mounting and balancing.

TEMPORARY SPARE TIRES
Any Goodyear or Dunlop temporary spare tire removed from service due to a covered warranty condition during the first 50% of usable treadwear (1/32") will be replaced with a comparable new Goodyear or Dunlop temporary spare tire at no charge, including mounting.

PRORATED ADJUSTMENT
Tires not eligible for free replacement that are removed from service due to a covered warranty condition will be replaced with a comparable new Goodyear or Dunlop tire on a prorated basis for up to six (6) years from the date of original new tire purchase or when the treadwear indicators become visible (worn to 2/32"), whichever occurs first. (Without proof of purchase the date of manufacture will be used to determine eligibility.)

HOW WILL PRORATED CHARGES BE CALCULATED?
Replacement price will be calculated by multiplying the tire’s advertised retail selling price at the time of adjustment by the
percentage of usable original tread that has been worn off. You pay for mounting and balancing, and an amount equal to the current Federal Excise Tax (F.E.T. – U.S. only) and any other applicable taxes and government-mandated charges.

EXAMPLE: If your disabled tire had an original 8/32” of usable treadwear and is worn to 4/32” usable tread remaining, you have used 50% and therefore must pay 50% of the advertised retail selling price of the comparable tire.

In addition, you must pay an amount equal to the full current Federal Excise Tax (U.S. only) or any other applicable taxes and government-mandated charges for the comparable new replacement tire at the time of adjustment. If the price of the new comparable tire is $130.00, the cost to you would be $65.00 plus F.E.T. (U.S. only) plus any other applicable taxes and government-mandated charges.

WHAT IS A COMPARABLE TIRE?
A “comparable” new Goodyear or Dunlop tire will be the same brand tire and may be either the same line of tire or, in the event that the tire is not available, the same brand tire with the same basic construction and similar performance attributes with a different sidewall or tread configuration. If a higher priced tire is accepted as replacement, the difference in price will be at an additional charge to you. Any replacement tire provided pursuant to this warranty will be covered by the warranty in effect at the time of replacement.

ADDITIONAL PROVISIONS
A tire has delivered its full original tread life and the coverage of this limited warranty ends when the treadwear indicators become visible (worn to 2/32”) or six (6) years from the date of new tire purchase, whichever occurs first. (Without proof of purchase the date of manufacture will be used to determine eligibility.)

LIMITATIONS
This limited warranty is applicable only in the United States and Canada.

WHAT IS NOT COVERED BY THIS WARRANTY?
This limited warranty does not cover the following:

• Tires submitted for ride disturbance complaints that are worn beyond the first two thirty-seconds of an inch (2/32”) tread depth or tires submitted for ride disturbance due to damaged wheels or any vehicle condition.

• Goodyear does not warrant or give credit in any adjustment transaction for any kind of material added to a tire (e.g., tire fillers, sealants, balancing substances) after the tire leaves a factory producing Goodyear or Dunlop tires, nor will it adjust any tire that has failed as a result of adding such material.

• Irregular wear or damage due to mechanical condition of the vehicle, improper inflation, overloading, high speed spin-up, misapplication, misuse, negligence, racing, use of tire chains, improper mounting or demounting, improper repair, wreck, collision or fire.

• Road hazards (includes, but is not limited to, punctures, cuts, snags, impact breaks, etc.).

• Any tire that, after leaving a factory producing Goodyear or Dunlop tires, has been intentionally altered to change its appearance (e.g., white inlay on a black tire or regrooved).

• Tires with weather-cracking that were purchased more than four (4) years prior to presentation for adjustment or, if purchase date cannot be verified, manufactured more than four years prior to presentation for adjustment.
• Temporary spare tires used on vehicles used in racing and on passenger cars in special applications such as police pursuit service.
• Goodyear Unisteel Commercial Radial Light Truck Tires.
• Tires removed from service due to improper repairs.
• Tires supplied as Original Equipment are not eligible for any tread life warranty consideration.
• Cosmetic weather checking
• Low tire pressure-monitoring system – refer to vehicle manufacturer's warranty.
• Ultra high-performance summer tires are not recommended for winter use, and tread or shoulder cracking on those tires resulting from winter use will not be covered under our warranty.

WHAT ARE YOUR LEGAL RIGHTS?
No Representative or Dealer has authority to make any representation, promise or agreement on behalf of Goodyear, except as stated herein. Any tire, no matter how well constructed, may fail in service or otherwise become unserviceable due to conditions beyond the control of the manufacturer. Under no circumstances is this warranty a representation that a tire failure cannot occur.

DISCLAIMER: THIS WARRANTY IS IN LIEU OF, AND GOODYEAR HEREBY DISCLAIMS, ANY AND ALL OTHER WARRANTIES AND REPRESENTATIONS, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, AND NO OTHER WARRANTY OR REPRESENTATION OF ANY KIND IS MADE BY GOODYEAR OR SHALL BE IMPLIED BY LAW.

LIMITATION OF DAMAGES: IN NO EVENT AND UNDER NO CIRCUMSTANCE SHALL GOODYEAR BE LIABLE TO THE BUYER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, CONSEQUENTIAL, LOST PROFIT, LOSS OF BUSINESS, LOSS OF GOODWILL OR REPUTATION, PUNITIVE OR OTHER DAMAGE, COST (INCLUDING FOR REPLACEMENT TRANSPORTATION), EXPENSE OR LOSS OF ANY KIND. SOME STATES AND PROVINCES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU.

This warranty gives you specific legal rights and you may also have other rights that vary from state to state or province to province.

HOW DO YOU OBTAIN AN ADJUSTMENT?
A. You must present the tire to be adjusted to an authorized Goodyear or Dunlop service facility. Tires replaced on an adjustment basis become the property of The Goodyear Tire & Rubber Company, Goodyear Dunlop Tires North America, Ltd. or Goodyear Canada Inc.

B. You must pay for taxes and any additional services you order at the time of adjustment plus any additional service that may be unique to your application, e.g., Tire Pressure-Monitoring System.

C. You must submit your claim on an approved claim form supplied by an authorized Goodyear or Dunlop service facility. The form must be filled out completely and signed, where you, the owner, or your authorized agent presented the tire for adjustment.

You must go to an authorized Goodyear or Dunlop outlet for replacement tires and all warranty service.

SAFETY WARNINGS
Property damage, serious injury or death may result from:
• **TIRE FAILURE DUE TO UNDERINFLATION/OVERLOADING/MISAPPLICATION.** Follow the vehicle owner’s manual or tire placard in vehicle.

• **TIRE FAILURE DUE TO IMPACT DAMAGE/IMPROPER MAINTENANCE.** Tires should be inspected regularly by a qualified technician for signs of damage, such as punctures or impacts.

• **TIRE FAILURE DUE TO IMPROPER REPAIRS.** See U.S. Tire Manufacturers Association (USTMA) established repair procedures at www.ustires.org and/or go to www.goodyear.com for information on proper repair procedures.

• **EXPLOSION OF TIRE/RIM ASSEMBLY DUE TO IMPROPER MOUNTING.** Only specially trained persons should mount tires.

• **FAILURER TO MOUNT RADIAL TIRES ON APPROVED RIMS.**

• **FAILURER TO DEFLATE SINGLE OR DUAL ASSEMBLIES COMPLETELY BEFORE DEMOUNTING.**

• **TIRE SPINNING.** On slippery surfaces such as snow, mud, ice, etc., do not spin tires in excess of 35 mph (55 kph), as indicated on the speedometer.

• **EXCESSIVE WHEEL SPINNING.** This can also result in tire disintegration or axle failure.

**WARNING:** Vehicle handling, traction, ride comfort and other performance parameters may be significantly affected by a change in tire size or type. Before replacing tires, always consult and follow the vehicle owner’s manual because some vehicle manufacturers prohibit changing tire size. When selecting tires that are different from the original equipment size make certain: (1) The tires have adequate load-carrying capacity based on the vehicle placard, (2) The tires have sufficient inflation pressure to carry the load and (3) There is proper clearance with no interference points between the tire and vehicle. The consumer must be aware to always drive safely and obey all traffic laws. Avoid sudden, sharp turns or aggressive lane changes. Failure to follow any of these warnings may result in loss of control of the vehicle, leading to an accident and serious injury or death.

**TIRE CARE AND MAINTENANCE GUIDE**

The easiest way to help ensure satisfactory mileage and performance from your Goodyear or Dunlop tires is to give them a simple but frequent (at least monthly) inspection for proper inflation, even treadwear and the presence of any damage.

**DO MAINTAIN PROPER INFLATION PRESSURE IN YOUR TIRES**

Proper inflation pressure is necessary for optimum tire performance, safety and fuel economy. Check inflation pressures at least once a month and before long trips. Use an accurate tire pressure gauge. Always check pressures when the tires are cold (when the vehicle has been driven less than one mile).

If you must check inflation when the tires are hot, add 4 psi (27 kPa) to the recommended cold inflation pressure. It is difficult to tell just by looking at radial tires whether they are underinflated.*

Furthermore, when operating a vehicle equipped with radial tires, it is difficult to notice when a tire has gone flat or nearly flat since the "feel" of the vehicle does not change significantly.

*Evidence of air loss or repeated underinflation always requires expert inspection to determine the source of leakage and tire removal to determine repairability. To avoid injury, NEVER
attempt to reinflate a tire that has been run severely underinflated. Progressive air loss may result from punctures, cuts, curbing, impacts or partial bead unseating. Some fitment causes for air loss are (1) incomplete bead seating and (2) bead tearing caused by a machine tool due to insufficient lubrication or improper adjustment. Leaking valve core or rubber valve components should be replaced when problems are detected and whenever tires are replaced.

**Always maintain inflation pressure at the level recommended by the vehicle manufacturer as shown on the vehicle placard, vehicle certification label or in the vehicle owner’s manual:**

Underinflation is the leading cause of tire failure and may result in severe cracking, component separation or “blowout.” It reduces tire load capacity, allows excessive sidewall flexing and increases rolling resistance, resulting in heat and mechanical damage. Maintaining proper inflation pressure is the single most important thing you can do to promote tire durability and maximize tread life.

Overinflation increases stiffness, which may deteriorate ride and generate unwanted vibration. Overinflation also increases the chances of impact damage.

**DON’T OVERLOAD YOUR VEHICLE**

Check your vehicle owner’s manual to determine the load limits. Overloading your vehicle places stress on your tires and other critical vehicle components. Overloading a vehicle can cause poor handling or increased fuel consumption and may cause tire failure. Overloading your tires can result in severe cracking, component separation or “blowout.”

Never fit your vehicle with new tires that have less load capacity than shown on the vehicle tire placard and remember that optimum rim width is important for proper tire load distribution and function. The maximum load capacity stamped on the sidewalls of P-Metric & European Metric tires is reduced by 10% when used on a light truck, utility vehicle or trailer. Never fit P-Metric or European Metric tires to light trucks that specify LT-type replacement tires.

**DON’T SPIN YOUR TIRES EXCESSIVELY**

Avoid excessive tire spinning when your vehicle is stuck in snow, ice, mud or sand. The centrifugal forces generated by a free-spinning tire/wheel assembly may cause sudden tire explosion, resulting in vehicle damage and/or serious personal injury to you or a bystander. Never exceed 35 mph/55 kph, as indicated on your speedometer. Use a gentle backward and forward rocking motion to free your vehicle for continued driving. Never stand near or behind a tire spinning at high speeds, for example, while attempting to push a vehicle that is stuck or when an on-the-car spin balance machine is in use.

**DO CHECK YOUR TIRES FOR WEAR**

Always remove tires from service when they reach two thirty-seconds of an inch (2/32") remaining tread depth. All new tires have treadwear indicators which appear as smooth banks in the tread grooves when they wear to the two thirty-seconds of an inch (2/32") level. Many wet weather accidents result from skidding on bald or nearly bald tires. Excessively worn tires are also more susceptible to penetrations.

**DO CHECK YOUR TIRES FOR DAMAGE**

Frequent (at least monthly) inspection of your tires for signs of
damage and their general condition is important for safety. If you observe or experience impact, impact damage, penetrations, cracks, bulges or air loss, your tires should be dismounted and inspected by an expert. If you have any questions, have your tire Dealer inspect them. Never perform a temporary repair or use an inner tube as a substitute for a proper repair. Only qualified persons should repair tires.

**PROPER TIRE REPAIR**

NOTE: Goodyear does not warrant any inspection or repair process. The repair is entirely the responsibility of the repairer and should be made in accordance with established U.S. Tire Manufacturers Association (USTMA) procedures.

**Tire Pressure-Monitoring System Alert**

Refer to your vehicle Owner's Manual for more information on what to do if the tire pressure warning system activates.

**THE CONVENIENCE (TEMPORARY) SPARE**

The Convenience (Temporary) Spare is designed, built and tested to the high engineering standards set by North America's leading car manufacturers and to Goodyear's own high standards of quality control. It is designed to take up a minimum of storage space and, at the same time, fulfill the function of a spare tire when needed. The spare is kept in its storage space, fully inflated at 60 psi. To be sure it is always ready for use, the air pressure should be checked on a regular basis.

The Convenience (Temporary) Spare can be used in combination with the original tires on your vehicle. You can expect a tire tread life of up to 3,000 miles (4,800 kilometers), depending on road conditions and your driving habits. To conserve tire tread life, return the spare to the storage area as soon as it is convenient to have the standard tire repaired or replaced.

The Convenience (Temporary) Spare weighs less than a standard tire so it's easier to handle. It also helps reduce the total car weight, which contributes to fuel economy.

The wheels used with the Convenience (Temporary) Spare are specifically designed for use with high pressure spares and should never be used with any other type tire.

**SPECIAL TRAILER (ST) TIRES:**

Your Goodyear Special Trailer (ST) tires are specifically designed and constructed to optimize their performance on non-driven trailer axle applications. Goodyear's Special Trailer (ST) tires are used on popular vehicle fitments, including, but not limited to: Travel Trailers, Utility Trailers, Equipment Trailers, Watercraft Trailers, Car Haulers, etc..

Due to the seasonal nature and often unique loadability of these trailers, it is very important to check inflation pressures at least once a month and before trips. Use an accurate tire pressure gauge. Always check pressures when the tires are cold (when the trailer has been driven less than one mile). If you must check inflation when the tires are hot, add 4 psi (27 kPa) to the recommended cold trailer placard inflation pressure. It is difficult to tell just by looking at radial tires whether they are underinflated. Check your trailer's certification placard to determine the load limits. Overloading your trailer places stress on your tires and other critical vehicle components. Overloading a trailer can cause poor handling or increased fuel consumption.
and may cause tire failure. Overloading your trailer tires can result in severe cracking, component separation or “blowout.” Never fit your trailer with new tires that have less load capacity than shown on the trailer’s tire placard and remember that optimum rim width is important for proper tire load distribution and function.

Inspection of your Special Trailer tires is an important function. Frequent (at least monthly) and before any trip inspection of your tires for signs of damage and their general condition is important for safety. If you observe or experience impact, impact damage, penetrations, cracks, bulges or air loss, your tires should be dismounted and inspected by an expert. If you have any questions, have your tire Dealer inspect them. Never perform a temporary repair or use an inner tube as a substitute for a proper repair. Only qualified persons should repair tires.

It is also important to properly store your trailer and its tires. A good resource for tire storage recommendations is the U.S. Tire Manufacturers Association website at www.ustires.org.

DON’T ATTEMPT TO MOUNT YOUR OWN TIRES

Serious injury or death may result from explosion of tire/rim assembly due to improper mounting procedures. Follow tire manufacturer’s instructions and match tire diameter to rim diameter. Mount light truck radians on rims approved for radial service. Do not apply bead sealer. This can inhibit bead seating. Lubricate beads and tire rim (including tube or flap) contact surfaces. Lock assembly on mounting machine or place in safety cage. STAND BACK and never exceed 40 psi to seat beads. Never use a volatile substance or a rubber “donut” (also known as a bead expander or “O-Ring”) to aid bead seating. Only specially trained persons should mount tires.

DON’T MIX TIRES OF DIFFERENT SIZES AND TYPES ON THE SAME AXLE

For optimum handling and control, Goodyear recommends fitment of four (4) tires of the same type and size unless otherwise specified by the vehicle manufacturer.

WARNING: Before you replace your tires, always consult the vehicle owner’s manual and follow the vehicle manufacturer’s replacement tire recommendations. Vehicle handling may be significantly affected by a change in tire size or type. When selecting tires that are different from the Original Equipment size, see a professional installer in order to make certain that proper clearance, load-carrying capacity and inflation pressure are selected. Never exceed the maximum load capacity and inflation pressure listed on the sidewall of the tire. Always drive safely and obey all traffic laws. Avoid sudden, sharp turns or aggressive lane changes. Failure to follow this warning may result in loss of control of the vehicle, leading to an accident and serious injury or death.

When replacing tires, you must maintain the outside diameter and load-carrying capacity of the Original Equipment tire. Inflation pressure may need to be adjusted to avoid overloading the tire. Consult the Tire & Rim Association Load and Inflation Tables, ETRTO or JATMA standards for correct load and inflation information.

NEVER FIT TIRES TO A VEHICLE THAT HAVE LESS LOAD-CARRYING CAPACITY THAN REQUIRED BY THE ORIGINAL EQUIPMENT MANUFACTURER

Examples: Many vehicles, such as large passenger vans, require
Load Range E tires as designated by the vehicle manufacturer. Fitment of a tire, such as a Load Range D, with less carrying capacity is not allowed.

NOTE: Goodyear-manufactured and/or marketed European-Metric and P-Metric passenger tires are interchangeable as long as they have the same section width, same aspect ratio and same rim diameter. Caution: Never substitute a “Standard Load” (SL) tire for an "Extra Load" (XL) or "Reinforced" tire. If the vehicle was originally equipped with “Extra Load” (XL) or "Reinforced" tires, replace those tires with similar-sized "Extra Load" (XL) or "Reinforced" tires.

FOLLOW THESE ADDITIONAL GUIDELINES
When installing only two tires, fit the tires with the deepest tread depth on the rear axle. If radials and non-radials must be fitted to the same vehicle, fit radials on rear axle. Never mix radials and non-radials on the same axle. When fitting winter tires or all-season tires to performance vehicles, always fit in sets of four. It is not recommended to fit tires with different speed ratings. If tires with different speed ratings are installed on a vehicle, they should be installed with like pairs on the same axle. The speed capability of the vehicle will become limited to that of the lowest speed rated tires.

Use of lift kits with some vehicle/tire combinations can cause instability. When changing tire sizes, always consult Dealer for optimum rim width and carefully check vehicle/tire clearances.

RETREDED TIRES
Retreaded passenger and light truck tires are not warranted by Goodyear for any reason. Speed ratings and U.S. Department of Transportation test compliance certifications are voided for retreaded tires.

DO MAINTAIN VEHICLE SUSPENSION, WHEEL ALIGNMENT AND BALANCE AND ROTATE YOUR TIRES
Lack of rotation, worn suspension parts, underinflation/overinflation, wheel imbalance and misalignment can cause vibration or irregular tire wear. Rotate your tires according to your vehicle manufacturer’s recommendations or at maximum intervals of 6,000 miles/10,000 km.

FOR ADDITIONAL INFORMATION, SEE THE “BE TIRE SMART/PLAY YOUR PART BROCHURE” PUBLISHED BY U.S. TIRE MANUFACTURERS ASSOCIATION (USTMA). A COPY OF THIS BROCHURE CAN BE DOWNLOADED FROM THE USTMA WEBSITE:
https://www.ustires.org/publications

HOW TO READ A TIRE D.O.T. SERIAL NUMBER
D.O.T. stands for Department of Transportation and the number is on the lower sidewall of each tire to show that the tire meets or exceeds the Department of Transportation safety standards.

(9th week of 2011)
TIRE SERVICE LIFE
Tires are designed and built to provide many thousands of miles of excellent service. For maximum benefit, tires must be maintained properly to avoid tire damage that may result in removal from service before the tread is worn down to minimum depth.

It is not practical to accurately predict the service life of any specific tire in chronological time since service conditions vary widely. The serviceability of a tire over time is a function of the storage and service conditions (inflation pressure, load, speed, road hazard injury, etc.) to which a tire is subjected. Consumers should not rely solely on the appearance of the tire, but should be aware of any change in dynamic performance such as increased air loss, noise or vibration, which could be a sign to remove the tire. Therefore, it is essential to have tires, including spares, inspected regularly (at least monthly) for proper inflation pressure, damage and treadwear.

Check your vehicle’s owner’s manual (or your vehicle) to determine if it is equipped with run-flat (extended mobility) tires. If your vehicle is equipped with run-flat tires, the following applies:

RUN-FLAT TECHNOLOGY EXTENDED MOBILITY TECHNOLOGY (EMT™), RUNONFLAT® (ROF) AND DUNLOP SELF-SUPPORTING TECHNOLOGY (DSST®) ORIGINAL EQUIPMENT TIRES

IMPORTANT SAFETY INFORMATION

OPERATIONAL MONITORING
The information contained in this Limited Warranty Brochure applies only to the Original Equipment tires supplied with your vehicle.

In order for Goodyear Run-Flat (Extended Mobility Technology [EMT], RunOnFlat [ROF]) or Dunlop Run-Flat (Dunlop Self-Supporting Technology [DSST]) tires to obtain the performance criteria stated within this Limited Warranty, Goodyear or Dunlop Run-Flat tires must use specific parts, such as a low tire pressure-monitoring system authorized by the Original Equipment vehicle manufacturer.

RUN-FLAT TIRE FEATURE:
The Goodyear or Dunlop Run-Flat tire is a high-performance tire with a remarkable feature: It can operate for limited distances with very low or even no inflation pressure (refer to your Vehicle Owner's Manual for these limitations). This is an important benefit, especially if inflation loss occurs at a location where immediately stopping your vehicle could be hazardous.

TIRE PRESSURE-MONITORING SYSTEM ALERT
Refer to your vehicle Owner’s Manual for more information on what to do if the tire pressure warning system activates.

WARNING
If the tire pressure-monitoring system signals an alert, follow these safety precautions to prevent a loss of vehicle control that could result in serious personal injury or death:

• Slow your speed. Do not exceed 50 mph (80 kph).
• Avoid hard cornering, hard braking and severe handling maneuvers.
• Avoid potholes and other road hazards.

Remember that when your tires have lost air pressure, your vehicle’s handling capability is reduced, particularly during severe maneuvers.
TO PROLONG TIRE LIFE DURING A SYSTEM ALERT
The Goodyear or Dunlop Run-Flat tire can be driven at low or zero air pressure (refer to your vehicle Owner’s Manual for these limitations). To help prolong the life of a tire operating under low-inflation conditions, drive at a speed as far below 50 mph (80 kph) as possible. Also, drive the shortest distance possible before obtaining tire service. Taking these precautions will increase the chance that your tire will be repairable.

SERVICE AFTER A SYSTEM ALERT
To obtain service after operating under low-inflation conditions, contact your Goodyear or Dunlop Run-Flat service facility. Trained service personnel will inspect your tires to determine if they are in need of repair or replacement. To locate the nearest authorized Goodyear or Dunlop Run-Flat service facility, call 1-800-GOODYEAR (1-800-466-3932).

WARNING
Because of the unique characteristics of Run-Flat tires, the wheels on which they are mounted and your vehicle's tire pressure monitoring system, all tire service work other than routine inflation maintenance and external inspections must be performed by service personnel at a Goodyear or Dunlop Run-Flat service facility.

Do not attempt to mount or demount Run-Flat tires yourself; serious injury or death could result. Only specially trained persons should mount, demount and repair Run-Flat tires, and more than 40 psi (270 kPa) may be required to seat beads. A safety cage and clip-on extension air hose must be used if more than 40 psi (270 kPa) is need to seat beads.

TIRE REPAIR
Like any other Goodyear or Dunlop speed-rated, high-performance tire, the Goodyear or Dunlop Run-Flat tire may be repaired to correct a puncture in the tread, but PROPER MATERIALS AND PROCEDURES MUST BE USED. Contact a Goodyear or Dunlop Run-Flat service facility for information on proper repairs. For the location of the nearest facility, call 1-800-GOODYEAR (1-800-466-3932).

WARNING
Goodyear and Dunlop Run-Flat tires are designed for use only on certain original equipment wheels supplied with a properly operating low tire pressure-monitoring system. If applied to a vehicle without a properly operating low tire pressure-monitoring system, the tires may fail when operated in an underinflated condition, resulting in loss of vehicle control and possible serious injury or death. Application of these tires to a vehicle not equipped with specified operational low tire pressure-monitoring system constitutes improper and unsafe use of this product.

FOR SERVICE ASSISTANCE OR INFORMATION, FIRST CONTACT THE NEAREST GOODYEAR OR DUNLOP RETAILER.
1) For assistance in locating the nearest Goodyear or Dunlop Retailer, look in the Yellow Pages under Tire Dealers – New.
When replacing tires, you must maintain the outside diameter and obey all traffic laws. Avoid sudden, sharp turns or aggressive proper clearance, load-carrying capacity and inflation pressure are size, see a professional installer in order to make certain that selecting tires that are different from the Original Equipment significantly affected by a change in tire size or type. When
